Organisation profile

Inabensa is one of the leading Spanish industrial engineering, construction and maintenance companies in the energy, industry, services, environment, transport, and communications sectors.

Inabensa offers its customers total coverage through more than 30 work centers, manufacturing centers and stores throughout the country.

The R&D activities in Inabensa are focused on developing new and innovative environmentally friendly technology for getting a sustainable industrial system. Hence, the main research areas are divided into:

- Carbon capture and reutilization technologies.
- Energy efficiency.
- Renewables: sea energy.
- Electric Vehicle.

Main Green Cars activities: Products and Projects

Inabensa I+D has two main researching lines in Green Cars telematics.

- Integration of Electric Vehicle in the current networks (vehicle/infrastructure/grid). Design and installation of bidirectional Smart Charging Stations in the Smart City Grid.
- Energy Storage Technology. Batteries
